Professional Experience

Zenimax Online Studios | Jun 2022 – Present

Elder Scrolls Online (PC / Xbox / PlayStation)

Systems Designer

- Worked across multiple departments to ship 4 feature updates each year with a focus on maintaining quality standards in housing, itemization, zone support, live events, and achievements.
- Led development of *Hero's Return*, a returning user onboarding experience that rewards and reintroduces players to core game mechanics, advanced activities/systems, and social tools.
- Led development of *Path to Adventure*, a new user onboarding experience that provides players with a set of curated tasks, milestones, and rewards that empower their early in-game journey.
- Designed and implemented 2-3 player customizable housing spaces per feature update, delivering new earnable rewards and premium marketplace products to hit monetization goals.
- Rapidly prototyped, pitched, and shipped new interactable house features to create new gameplay spaces for players and notable market products features.
- Collaborated with community and data analytics teams to successfully address player quality of life requests such as multi-fish filleting, furnishing material economy rebalance, and furnishing alignment tools.
- Produced documentation uniquely tailored for stakeholder review, QA test plan creation, and cross department knowledge sharing.
- Created tools to make and improve development/handoff processes.

Personal Projects

Run N' Gun (PC) 2022 | https://store.steampowered.com/app/1945060/Run_N_Gun/

Arcade Shooter with an emphasis on high momentum movement developed in 18 weeks for a university capstone project.

Lead Programmer / Designer

- Designed and implemented a rollerblading physics-based movement system.
- Designed and implemented 3 enemy types, each with their own unique movement and combat playstyles.
- Implemented 5 weapon types that compliment different first-person playstyles.
- Implemented a power up system that randomly spawns weapon and movement augmenting abilities from a pool of 6 unique power ups.
- Created the "Quip" system, a dynamic gameplay feature where in game enemies would perform comical voice lines based of in game events.
- Created engine tools for designers and artist to rapidly implement/iterate on movement, weapon, enemy, and power up behaviors.
